Due to the lag in timing that expenses are able to be posted to the accounting system, projected expenses are calculated using three months to the end of the year instead of the anticipated two months.

FY 2025 Milk Inspection Fee projected expenses of \$300,708 are \$19,191 more than the FY 2024 revenues of \$281,517. The excess of expenses over revenues is expected to expend the Milk Inspection cash balance in the last quarter of FY 2025.

ICS- 305 Lansing, MI April 7-9, 2025

Attendee: Dr. Brenee Peterson

From April 7th-9th I attended an Incident Command Training in Lansing, MI. The training was hosted by the Michigan Agriculture and Rural Development (MDARD). MDARD hired facilitators that have worked in FEMA related events in the past. The facilitators had a wide range of experience in natural disasters such as tornado response, hurricane response and mass causality.

The training included a review of the ICS structure and the duties that each position deals with during an event. Common positions included the Operations Chief, Logistics Chief, Finance, Liaison, Planning Section Chief, etc. A significant amount of time was spent on the concept of the planning "P" for incident command. The planning P is the organization of meetings throughout an incident that leads to the common goals and development of an incident action plan during an operational period of an incident. Throughout the week we worked through three different scenarios as if we were dealing with the incidents in real life. Our first incident included an oil spill. The goal of this incident was to familiarize ourselves with how the planning "P" gets set up and the different forms that are required to be filled out for an incident action plan. The second incident was a Coqui Frog incident. This incident was a bit more involved because it was an invasive species of frog that we had to eradicate from an island. Again, we practiced each section of planning P and discussed more in depth the actual operations of each person and the expectations. We also discussed some of the problems that you can encounter during a disaster like public perception of an incident, political views, etc. The last scenario was related to a Foot-Mouth-Disease outbreak. During this exercise, we had to practice getting a control zone in place and while doing so there were prompts that added challenges to the different positions (example: we had actors come into our facility as the governor, actors for relating to public threats, financial burden issues, a second disaster at the same time as the FMD, etc.)

This training was very beneficial! Getting to hear about real-world experiences and being able to apply the ICS structure in different scenarios helped solidify the basic concepts of ICS. Having the scenarios related to the agriculture industry also helped me see how we can implement this kind of structure during a disaster (regardless if it is disease related or not). The training also included ideas that I can include in our state-wide communication plan going forward. This opportunity also allowed for a great scale of networking from multiple different states and different jurisdictions. We had attendees from Texas, Kansas, West Virgina, Michigan just to name a few. Along with the different states we also had people from different disciplines. People came from police departments, wildland fire departments, agriculture, medical departments. There was a wide variety of experience and knowledge in this training.
